

COATING AND CONVERTING

ENGINEERING. MANAGEMENT. IMPROVEMENT.

Repeatable and reliable web handling, coating and converting is critical to on-time delivery and product quality. KLM offers coating, compounding, material delivery and converting engineering services and project management to optimize production, improve quality and reduce operating costs.

Project Management

KLM Controls provides consultation services for both new and existing coating and converting processes. We work with you to design systems that meet your application and operation requirements. We also provide project management services to walk you through conception to final startup and training.

Our equipment and control system upgrades optimize the efficiency and effectiveness of coating and converting processes so you can deliver quality products in less time.

Benefits:

PRODUCT QUALITY

Accuracy, repeatability and reliability are critical to providing quality products. KLM's systems effectively control the raw material delivery, web speeds and tensions, coating, drying and material handling to improve product construction and converting quality.

REDUCED OPERATING COSTS

KLM engineering services provide systems that are repeatable and reliable to reduce production waste and optimize raw materials and labor resources.

INCREASED PRODUCTION

KLM's systems and process experience will increase your production. Our systems provide better control which results in lower startup times, lower scrap, increased production speeds and increased production quality.

Customers:

- Avery Dennison
- MACTac
- RJF International
- HAR Adhesives and Coatings
- Situation Materials
- Ohio Packaging
